

ConX Orbit — Website Development Brief

For: Website Developer/Designer

From: Ghulam Murtaza, Founder

This is a full refresh of conxorbit.com. Read this fully before starting.

1. WHAT CONX ORBIT IS

ConX Orbit builds custom software and AI systems for the construction and façade industry. Right now, the main focus is client services — building real, working software for construction and façade companies. Alongside that, ConX Orbit is also building its own AI products for the industry, in the background, to launch when ready. The site should reflect both: **services first (the main business today), products in development (the direction we're heading).**

One-line summary: *ConX Orbit builds custom software and AI systems for construction and façade companies — proven on live projects.*

2. TWO-TRACK POSITIONING

Track A — Façade & Curtain Wall (lead with this — it's the specialty)

Audience: façade engineering firms, curtain wall fabricators, aluminum panel manufacturers, façade contractors.

Proof: a DWG-based project management platform (browser-based drawing viewer, panel tracking, AI chat over project data) built and in use for a client. Also an AI panel fabrication/bending calculation system, currently in development.

Track B — Construction Technology (the open door)

Audience: any construction company — contractors, project managers, permitting consultants, developers. Offering: custom software, workflow automation, AI tools built around a specific problem.

One company, one team. Façade is the proven depth, construction is the proven breadth.

3. TONE

Direct, warm, confident, never robotic or corporate. No filler ("excited to announce," "leveraging cutting-edge"). Short sentences, plain words. Real claims only

– nothing invented or projected as if it already happened.

4. SITE MAP

Keep the nav to 6-7 items max.

5. PAGE CONTENT

5.1 HOME

- **Hero:** Headline along the lines of *"We build software that runs on real construction and façade projects."* Subheadline: *"Custom platforms and AI tools for façade engineering and construction companies – built and proven."*
Primary CTA: "Start a Project." Secondary CTA: "See Our Work."
- **Proof strip:** one or two hard facts – e.g., "Built and deployed a full façade project management platform, live and in daily use."
- **Two-track intro:** Façade & Curtain Wall and Construction Technology side by side, one line each, "Learn more" links.
- **How we work:** 3 steps – Understand the problem → Build the working system → Deliver and support.
- **Case study teaser:** short pull from the strongest case study.
- **Closing CTA:** repeat "Start a Project."

5.2 SOLUTIONS → FAÇADE & CURTAIN WALL

- Intro: real pain points in the industry – drawing management chaos, no live panel tracking, manual reporting, poor client visibility.
- Overview of the DWG viewer / panel tracking / AI chat platform – what it does, in plain language, as an example of the kind of system we build.

- Overview of the fabrication/bending AI system – framed as in-development.
- CTA: "Want something built for your team? Let's talk."

5.3 SOLUTIONS → CONSTRUCTION TECHNOLOGY

- Intro: scattered documentation, manual reporting, compliance complexity, permitting friction.
- Capability areas: custom project/workflow tools, AI-assisted compliance and permitting support, reporting automation, site/field data tools.
- CTA: "Have a specific problem? Tell us about it."

5.4 PRODUCTS (in development)

New section showing that ConX Orbit is also building its own AI products for the construction/façade industry – not just doing client work. Keep this simple and honest: a short intro line ("Alongside client projects, we're building our own AI products for the industry – more coming soon") plus space for 1-3 product teasers as they become ready to show. This page can start light and grow over time as products mature.

5.5 CASE STUDIES

Template for real project stories: the problem, what was built, the result, a client quote if available. Build the page structure now — content gets filled in as case studies are finalized.

5.6 PARTNERS

New section for companies ConX Orbit works with or alongside — technology partners, manufacturing partners, referral partners, etc. Simple layout: logo/name, short description, maybe a link. Can start with a couple of names and grow. If nothing is confirmed yet, build the section with placeholder space so it's ready to populate.

5.7 ABOUT

- Company story: short, honest — started in broad AI/software consulting, found real depth building for façade/construction clients, now focused there while staying open to construction technology generally.
- Based in Pakistan, serving international clients.
- Team: Ghulam Murtaza (Founder), Mustafa (Operations/Technical Lead), plus general mention of the development team.

5.8 SERVICES

- Custom Software Development

- AI & Automation
- Website Development

Short description each, "Start a project" CTA.

5.9 CONTACT / START A PROJECT

Simple form: Name, Email, Company, What are you looking to build. Show direct contact info clearly — email, WhatsApp/phone. This company sells through conversation, not self-serve checkout, so make it very easy to reach a real person.

6. DESIGN DIRECTION

Professional, technical, credible — not flashy, not a generic startup look. Closer to a boutique engineering/software firm than a consumer app. Use real product screenshots where available instead of stock imagery or generic illustrations. Clean, structured, mobile-friendly, fast-loading. Avoid heavy animation — this audience (engineers, project directors) wants clarity over flash.

7. TECHNICAL REQUIREMENTS

- CMS or structure that allows easy content updates (new case studies, products, partners) without needing a developer each time.
 - Fast load times, clean SEO basics (headings, meta descriptions, alt text).
 - Contact form routes reliably to founder@conxorbit.com with no delay.
 - Basic analytics set up from day one.
-

8. NOTES

- Some page content (specific case study details, product names, partner names) will be finalized and provided separately as they're confirmed — build the structure and templates now using this brief, content gets filled in as it's ready.
- Retire old site content that no longer applies: marketplace/vendor-listing pages, hardware/robotics content, the old CheckMate/ElectraX/Daily Site Log product roadmap, and generic buzzword copy ("revolutionary," "cutting-edge," "AI ecosystem").
